# Installing PatientKeeper on Apple® Devices
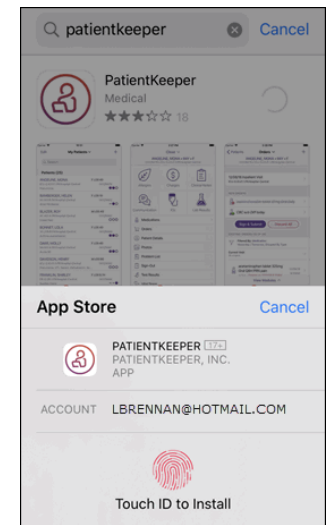

**1** Tap the **App Store** icon.

2 Tap the **Search** icon.

**3** Search for "patientkeeper."

4 Locate the **PatientKeeper** app with the white icon and tap **GET**. (Do *not* choose the PK8 app.)
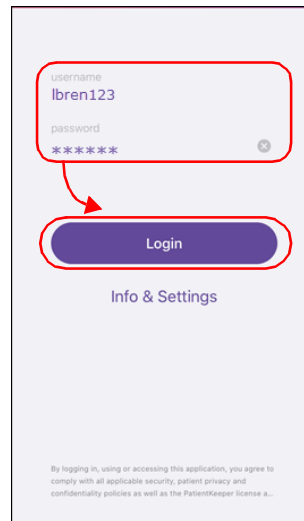

5 Although you will be prompted to enter your Apple ID and password (or Touch ID or Face ID), the PatientKeeper app is free.
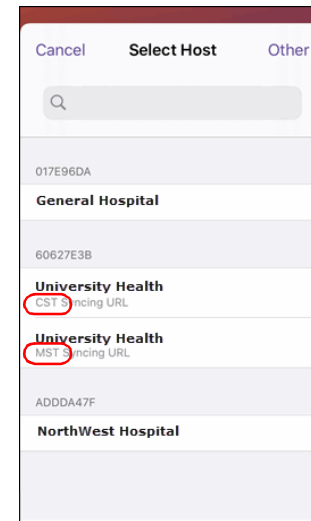

**6** After the app finishes installing, tap **OPEN**.

7 When prompted about notifications, tap **Allow**.

8 On the Login screen, enter your PatientKeeper username and password (the same one you use to log into the PatientKeeper web application). Contact your system administrator if you are unsure.

9 Your device will automatically provision and sync. However, if your username is used at more than one hospital, you may see this screen. Select your hospital. If it is listed with multiple time zones, select the time zone where you are located.

10 The PatientKeeper application opens and the Patient List screen is displayed. To view a short video tour of the application, tap the notification at the top of the screen.
